## CASH RECEIPTS FROM FARMING IN OHIO - 1959

Estimates of cash receipts obtained by Ohio farmers from the sale of farm products in 1959 show a decline of 4.4 percent compared to the revised estimate of 1958 cash receipts.

When government payments are included in total cash receipts for the two years, the percentage decrease goes up to 6 percent. The 1959 government payments were less than half those of 1958.

The 1959 cash farm income, including government payments, of \$955,706,000 was the lowest since 1950, when the total dropped to \$855,075,000. The first billion dollar cash farm income was received by Ohio farmers in 1947.

Receipts from all farm enterprises in 1959 (excluding government payments) are estimated at \$939,706,000 compared to \$982,767,000 in 1958. However, receipts from crops were \$361,244,000, about 5 percent greater than the 1958 receipts of \$343,911,000. On the other hand, receipts from livestock and livestock products in 1959 of \$578,482,000 were 9.5 percent below the 1958 figure of \$638,856,000. The sharpest decrease in livestock income occurred in hogs and poultry, with decreases of 24 percent and 18.4 percent respectively.

Dairy products led the way in cash farm income in 1959 followed by cattle and calves, and hogs in that order. These products held the three top places in 1958 also, but with hogs and cattle and calves in reverse order. Dairy products held first place in 46 counties as the major source of income in 1959, hogs, in 14 counties, and cattle and calves, in 13 counties. (See Table III)

The four leading counties in total cash receipts are Wood, Darke, Wayne and Fulton in order, all with over \$20,000,000 in total receipts. Wood leads all counties in cash income from corn and soybeans, Darke in poultry, Wayne, in dairy products, and Fulton, in cattle and calves. Other firsts are Clinton in hogs; Seneca, in wheat; Lucas, in truck crops; and Cuyahoga in greenhouse and nursery products.

These estimates of cash receipts should not be confused with gross farm income, which includes other agricultural income, such as the value of home consumption, or with net farm income, which makes an allowance for farm production expenses.

ESTIMATED CASH RECEIPTS BY OHIO FARMERS FROM THE SALE OF AGRICULTURAL  
PRODUCTS AND FROM GOVERNMENT PAYMENTS, BY COUNTIES - 1959

Explanations

The purpose of this study is to estimate the 1959 cash receipts from farm marketings for each of the 88 counties in Ohio. Cash receipts, in this study, denotes the actual cash receipts from the sale of agricultural commodities in the county; however, interfarm sales of livestock, the value of crops used for feed, seed and household use, and income from outside work or investments are excluded. Therefore, the data do not necessarily indicate the relative importance of the various enterprises, but rather their importance as sources of cash receipts. These estimates of cash receipts should not in any way be confused with the net income of Ohio farmers.

Similar estimates of cash receipts by Ohio farmers have been made for 1927 and for each year since 1929. The results have been published in mimeograph bulletins of the Department of Agricultural Economics, the Ohio State University and the Ohio Agricultural Experiment Station, with the cooperation of the Crop Reporting Service of the Agricultural Marketing Service.

All cash receipt figures were calculated for the calendar year as in the previous studies since 1939. State totals of cash receipts were supplied by the Farm Income Branch, Division of Agricultural Economics, Agricultural Marketing Service. Other data used as a basis for this study were obtained from the Ohio Crop Reporting Service and 1954 U. S. Census of Agriculture. Certain changes of methods of calculation become necessary from year to year due to changes in basic sources of information; therefore, figures for some items are not strictly comparable. However, a fair picture of the sources of agricultural cash receipts and their relative importance is given by this study.

State total cash receipts from sales is the same as the published USDA total cash receipts from sales as shown in Tables I, II, IV, V, and VI. Table III pictures the number of counties classified according to the ranking of main agricultural commodities as a source of cash receipts. Cash receipts from the sale of cull dairy cows and veal calves previously were added to the Dairy enterprise but, since last year's study, they are included in cash receipts from cattle and calves. The 1959 cash receipts from the sale of cull dairy cows and veal calves have been estimated at \$38,489,000. The cost of feeder cattle purchased was not deducted from cattle sales. The poultry enterprise includes the cash receipts from eggs, farm chickens, commercial broilers, turkeys, and other poultry. The sheep enterprise includes receipts from sheep, lambs and wool and, as in the case of cattle, deduction for the cost of feeder sheep purchased was not made from sales. The vegetable crop enterprise includes canning crops and other vegetables grown for fresh market sales except greenhouse products and potatoes which were estimated separately. The fruit crop enterprise includes cash receipts from small fruits as well as from tree fruits and nuts.

Government payments include payments made under the Agricultural Conservation, Sugar Beet, Soil Bank and Wool programs. The Agricultural Conservation payments used here are based on the amounts earned, by counties, during the 1958 and 1959 calendar years which were paid out during 1959. Sugar Beet payments refers to the amount earned by counties, in 1958, the major portion of which was received by farmers during the 1959 calendar year. Payments under the Soil Bank program include payments for both the Acreage Reserve and Conservation Reserve programs, actually made during 1959.

Wool payments include both shorn wool and unshorn lamb payments actually made during 1959. The authors are very grateful to the personnel of the Ohio Agricultural Stabilization and Conservation who furnished data on Government payments by counties.

Since a great variation exists in the size of the counties, the estimated cash receipts per farm and per acre have been calculated, by using the 1954 U. S. Census number of farms and acres of all land in farms, to serve as a basis for comparing the counties. This data appears now in Table IV. The low cash receipts per acre in some of the counties is due in part to the fact that the acreage designated by the Census as acres of all land in farms includes a considerable amount of land not actually under cultivation and some not even used for pasture. The number of farms, given by the Census, includes tracts of three acres or more, if the value of agricultural products in 1954, exclusive of home gardens, amounted to \$150 or more. Places of less than three acres were counted as farms only if the value of sales of agricultural products in 1954 amounted to \$150 or more.

The question is often asked as to whether cash receipts truly represent the importance of individual agricultural commodities in Ohio. The relative importance for some commodities would be rated differently if we include the value of the commodities used on the farm. The value of corn, oats and hay used on farms where produced during 1959 in Ohio have been estimated at 156 million dollars for corn, 26 million dollars for oats and 70 million dollars for hay.

TABLE I

## CASH RECEIPTS FROM FARMING AND GOVERNMENT PAYMENTS, OHIO, 1924 - 1959
